Experience

EvenUp

Jan 2026 - Present

Senior Software Engineer (AI Voice Agents)

Toronto, Ontario

- Building backend systems for EvenUp's **voice agents platform**, enabling **AI agents** to call external providers and complete legal casework tasks for law firm clients
- Designing retryable **voice agent call workflows** and using **LLM-based transcript analysis** to interpret call results, track outcomes, and decide next steps

Wealthsimple

Jul 2024 - Dec 2025

Senior Software Engineer (Client Platform)

Toronto, Ontario

- Designed and built a system for automated annual client profile reassessments in **Ruby**, processing 2.4M+ client profiles annually
 - Implemented automated triggers and notifications for timely reassessments
 - Integrated risk and suitability calculations to optimize tax savings of up to 50% for clients
 - Refactored agreement signing services, reducing error rates by 90% and improving the in-app client signing experience
- Led observability initiatives by developing automated tooling to monitor error rates and automatically create **SLOs and monitors** for GraphQL endpoints across multiple Ruby services
 - Created **Datadog** monitors and Sentry error tracking to reduce incident detection time from several minutes to under 5 minutes, improving overall system reliability
- Developed an identity conflict detection system in **Ruby** that proactively identifies duplicate client profiles and potential fraud attempts
 - Reduced fraudulent account creation by 70% by building a profile comparison rules engine and prevented over \$1,000 in potential monthly fraud losses
 - Automated conflict resolution workflows saving support teams 100+ hours monthly in manual review time

Datadog

Jan 2020 - Jun 2024

Software Engineer (Alerting and Service Level Objectives)

New York, NY

- Architected a change data capture pipeline using **Kafka and Debezium** to index SLO (Service Level Objective) data records into Elasticsearch
 - Achieved a 75% increase in search speed, expanded support for complex queries, and successfully reduced the request load on critical upstream services by 60%
- Led frontend development as technical lead for the SLO product, building scalable components in **TypeScript and React**
 - Designed and developed data visualizations and UIs that effectively communicate Service Level Objective insights to customers
- Optimized a headless browser service handling hundreds of requests per minute by migrating from PhantomJS to Puppeteer, achieving a 40% reduction in p90 response time

PagerDuty

Jun 2017 - Dec 2019

Software Engineer (Developer Platform and APIs)

Toronto, Ontario

- Developed a resilient microservice for real-time computation of account features and entitlements using **Elixir, Kafka, and MySQL**, serving 1,000+ daily requests with 99.9% uptime
- Led the development of a new API supporting the PagerDuty app ecosystem, enabling developers to create third-party integrations that expanded the platform's ecosystem and increased customer retention
- Built a **React** based developer portal for the API platform, streamlining the registration and publishing process for custom applications
- Built Datadog monitors to detect service issues and supported the team's on-call rotation

Education

Bachelor of Applied Science (BASc), Computer Engineering

Sep 2010 - May 2017

University of Waterloo

Waterloo, Canada

Skills

Programming Languages: Python, JavaScript/TypeScript, Golang, Elixir, Ruby

Frameworks: Flask, Ruby on Rails, NodeJS, GraphQL

Data Tooling and Infrastructure: MySQL, PostgreSQL, Kafka, Elasticsearch, Kubernetes, Terraform

Other Interests: Traveling, Cooking, Hiking and Camping, Running Marathons
